

## Technical Support for Solution of Power Management

TCLAD Inc's Thermal Clad Insulated Metal Substrates (IMS) are key components in heat dissipation solutions in electronics for Industrial 4.0 applications, such as automation, motion controls and high-speed computing. The impact on human resources in industry, due to the COVID-19 epidemic, has generated greater need for unmanned factories. Working from home and remote control of operations and related technologies have become very relevant topics.

Thermal Clad IMS laminates and circuits have, and continue to, supply reliable and efficient thermal performance solutions to the industrial market for more than 30 years. Helping our customers to increase product lifetime and to resolve thermal challenges is what we do. Please contact our Technical and Sales Support Teams for more details.
